## 2. Citations and explanations (Rule 70.7)

The subject matters of claims 1, 7, 13 and 20 are described in document 1 (paragraphs [0026], [0027] and [0042]-[0044]), and so do not appear to involve an inventive step.

The subject matters of claims 2, 3, 8, 9 and 14-17 have features wherein respective conditions for breakpoints described therein can be set variously; on the other hand, the above-mentioned document only describes "a breakpoint mark P". However, the constitution wherein it is possible to set such mark is a matter of design variation that a person skilled in the art could have made as required.

The feature described in claims 4, 10 and 18 wherein "the positional relationship in each line of characters on a print medium can be changed" is an obvious matter in the technical field of printers.

The feature described in claims 5, 11 and 19 wherein "characters or marks that the conditions for breakpoint themselves represent are printed on a label" is not described in the above-mentioned document; however, because such breakpoint marks themselves are input in a line of characters in succession with such marks, it is within the expectation of a person skilled in the art to print a line of characters together with breakpoint marks.

The feature described in claims 6 and 12 wherein "characters or marks that the conditions for breakpoints themselves represent are not printed on the said label" is merely a matter of separating the information input in a printing device into the pieces to be printed and those not to be printed.
